

Regional Logistics Transfers Dataset - Feature Descriptions

This document describes the features included in the Regional Logistics Transfers Dataset.

Feature Name	Description
transfer_id	Unique transfer identifier. Intended for record identification and prediction submission purposes, and not necessarily recommended for direct use as a predictive feature.
operation_date	Date on which the transfer operation occurred.
day_of_week	Day of the week on which the transfer was performed.
scheduled_dispatch_time	Scheduled dispatch time of the transfer in HHMM format.
expected_dispatch_delay_minutes	Estimated dispatch delay generated from operational planning systems and historical information.
scheduled_arrival_time	Scheduled arrival time at the destination facility in HHMM format.
source_facility	Anonymous identifier of the source facility.
source_region	Anonymous identifier of the source region.
destination_facility	Anonymous identifier of the destination facility.
destination_region	Anonymous identifier of the destination region.
logistics_provider	Anonymous or encoded identifier of the logistics provider responsible for the transfer.
scheduled_travel_time_minutes	Scheduled transfer duration in minutes.
route_distance_miles	Estimated transfer route distance in miles.
expected_provider_delay_minutes	Estimated delay associated with provider-related operational factors.
weather_disruption_minutes	Delay in minutes attributed to weather-related disruptions.
network_congestion_delay_minutes	Delay in minutes attributed to congestion in the logistics network.
expected_inspection_delay_minutes	Estimated delay associated with inspections, controls, or approval procedures.
expected_weather_disruption_minutes	Estimated delay associated with weather-related disruptions.
expected_network_congestion_delay_minutes	Estimated delay associated with congestion within the logistics network.

weather_congestion_index	Combined index representing the interaction between weather disruptions and network congestion.
external_system_score	Score generated by an external operational system. A large portion of the values are intentionally missing.
internal_metric_a	Anonymous internal operational metric.
internal_metric_b	Anonymous internal operational metric.
internal_timestamp_a	Anonymous internal operational timestamp.
internal_timestamp_b	Anonymous internal operational timestamp.
internal_operational_score	Internal operational score generated for analytical purposes.
is_delayed	Target variable. A value of 1 indicates that the transfer was delayed by more than 30 minutes, while 0 indicates that the transfer was not delayed by more than 30 minutes.
